METHODOLOGY, SAMPLE FRAME CONSTRUCTION AND DATA COLLECTION PROCEDURES

This poll was sponsored by Blueskin Solutions, and conducted by Susquehanna Polling and Research, Inc¹. Interviews were conducted March 11-14, 2024, with 501 registered voters in Pennsylvania. Survey respondents are randomly contacted using random selection procedures, and all telephone interviews are conducted using live telephone agents. The sample frame was compiled using random telephone sequence methods, and includes both landline and cellular households, purchased from a certified list vendor; all households are pre-screened to eliminate household telephone numbers on the federal Do Not Call registry in compliance with all applicable federal and state laws. Only known registered voters were contacted, compiled from a list of households with prior vote history in 1 of 4 or better general elections using G22, G21, G20 and/or G19 as the base universe. Voters who registered to vote after the 2022 general election are also eligible to participate.

Interviews are closely monitored to ensure a representative sample of the Pennsylvania electorate is achieved based on party registration, geography, gender, age cohort and other demographics; results are sometimes statistically weighted to adjust for coverage bias or non-response error.

The margin of error for a sample size of 501 interviews is +/-4.38% at the 95% confidence level.
